From filmmaker Mark Kitchell (*Berkeley in the Sixties*, *A Fierce Green Fire*) comes a new saga of social change, *EVOLUTION of ORGANIC*. It's the story of the organic agriculture movement, told by those who built it. Everybody loves the film. It's funny and engaging as well as informative and illuminating. It's a collective portrait, full of great stories and strong characters. We captured the arc of organic, from its alternative origins to mainstream triumph. Not just a history, the film explores the next generation expanding organic and carbon farming as a solution to climate
